**MOONCITY:** a prototype for a future green city

# Facilities in our city

In Mooncity we can find a church, two supermarkets, a pastry shop where they make very good desserts, many shopping centres, a police station, two hospitals, a town hall, a swimming pool and a school. There is also a gym, two leisure centres and one square. The streets are narrow and hidden, there are also two roundabouts and one crossroads. In the future Mooncity will be able to host 5,000 families.

# Types of houses

The houses in Mooncity are very large. There is not only one bathroom, there are a lot of bathrooms. They are very nice, always clean and large. In Mooncity there are beautiful small houses but there are also some apartments. There are also some beautiful hotels which I highly recommend you.

# Energy sources used to power our city

Mooncity is a real eco-city. The city is powered by solar and hydraulic energy. On all the roofs of the houses are installed solar panels.

There are also many mills to exploit the power of the river Star's water.

# Transport system

The transport system you'll find in this city is the magnetic train. The magnetic trains travel at a speed of over 500 km per hour.

Compared to other trains they do not run on rails, but they travel suspended a few centimeters from the ground thanks to the magnets.

# Green areas

In Mooncity there are a lot of green areas, but there are four principal parks, with benches, flowers and a lot of trees.

One park has got also a playground with slides, swings and rocking.

Another park has got a pond with geese, birds, frogs and a lot of fish.
